

Amazon Fine Food Reviews Analysis

Data Source: <https://www.kaggle.com/snap/amazon-fine-food-reviews>

The Amazon Fine Food Reviews dataset consists of reviews of fine foods from Amazon.

Number of reviews: 568,454

Number of users: 256,059

Number of products: 74,258

Timespan: Oct 1999 - Oct 2012

Number of Attributes/Columns in data: 10

Attribute Information:

1. Id
2. ProductId - unique identifier for the product
3. UserId - unique identifier for the user
4. ProfileName
5. HelpfulnessNumerator - number of users who found the review helpful
6. HelpfulnessDenominator - number of users who indicated whether they found the review helpful or not
7. Score - rating between 1 and 5
8. Time - timestamp for the review
9. Summary - brief summary of the review
10. Text - text of the review

Objective:

Given a review, determine whether the review is positive (Rating of 4 or 5) or negative (rating of 1 or 2).

[Q] How to determine if a review is positive or negative?

[Ans] We could use the Score/Rating. A rating of 4 or 5 could be considered a positive review. A review of 1 or 2 could be considered negative. A review of 3 is neutral and ignored. This is an approximate and proxy way of determining the polarity (positivity/negativity) of a review.

Loading the data

The dataset is available in two forms

1. Comma Separated File
2. SQLite Database

In order to load the data, We have used the SQLITE dataset as it easier to query the data and visualise the data efficiently.

Here as we only want to get the global sentiment of the recommendations (positive or negative), we will purposefully ignore all Scores equal to 3. If the score is above 3, then the recommendation will be set to "positive". Otherwise, it will be set to "negative".

[1]. Reading Data

In [2]:

```
# using the SQLite Table to read data.
# con = sqlite3.connect('/content/gdrive/My Drive/Amazon Fine Food Reviews/database')
con = sqlite3.connect("database.sqlite")
filtered_data = pd.read_sql_query(""" SELECT * FROM Reviews WHERE Score != 3 LIMIT 5

# Give reviews with Score>3 a positive rating, and reviews with a score<3 a negative
def partition(x):
    if x < 3:
        return 0
    return 1

#changing reviews with score less than 3 to be negative and above 3 to be positive
actualScore = filtered_data['Score']
status = actualScore.map(partition)
```

```
filtered_data['Score'] = status
print("Number of data points in our data", filtered_data.shape)
filtered_data.head(3)
```

Number of data points in our data (50000, 10)

Exploratory Data Analysis

Data Cleaning: Deduplication

It is observed (as shown in the table below) that the reviews data had many duplicate entries. Hence it was necessary to remove duplicates in order to get unbiased results for the analysis of the data.

In [18]:

```
display= pd.read_sql_query("""
SELECT *
FROM Reviews
WHERE Score != 3 AND UserId="AR5J8UI46CURR"
ORDER BY ProductID
""", con)
display.head()
```

Out[18]:

	Id	ProductId	UserId	ProfileName	HelpfulnessNumerator	HelpfulnessDenomina
0	78445	B000HDL1RQ	AR5J8UI46CURR	Geetha Krishnan	2	
1	138317	B000HDOPYC	AR5J8UI46CURR	Geetha Krishnan	2	

Id	ProductId	UserId	ProfileName	HelpfulnessNumerator	HelpfulnessDenominator
2	138277	B000HDOPYM	AR5J8UI46CURR	Geetha Krishnan	2
3	73791	B000HDOPZG	AR5J8UI46CURR	Geetha Krishnan	2
4	155049	B000PAQ75C	AR5J8UI46CURR	Geetha Krishnan	2

As can be seen above the same user has multiple reviews of the with the same values for HelpfulnessNumerator, HelpfulnessDenominator, Score, Time, Summary and Text and on doing analysis it was found that

ProductId=B000HDOPZG was Loacker Quadratini Vanilla Wafer Cookies, 8.82-Ounce Packages (Pack of 8)

ProductId=B000HDL1RQ was Loacker Quadratini Lemon Wafer Cookies, 8.82-Ounce Packages (Pack of 8) and so on

It was inferred after analysis that reviews with same parameters other than ProductId belonged to the same product just having different flavour or quantity. Hence in order to reduce redundancy it was decided to eliminate the rows having same parameters.

The method used for the same was that we first sort the data according to ProductId and then just keep the first similar product review and delete the others. for eg. in the above just the review for ProductId=B000HDL1RQ remains. This method ensures that there is only one representative for each product and deduplication without sorting would lead to possibility of different representatives still existing for the same product.

```
In [3]: #Sorting data according to ProductId in ascending order
sorted_data=filtered_data.sort_values('ProductId', axis=0, ascending=True, inplace=False)
```

```
In [4]: #Deduplication of entries
final=sorted_data.drop_duplicates(subset={"UserId","ProfileName","Time","Text"}, keep='first')
final.shape
```

Out[4]: (46072, 10)

```
In [21]: #Checking to see how much % of data still remains
(final['Id'].size*1.0)/(filtered_data['Id'].size*1.0)*100
```

Out[21]: 92.144

Observation:- It was also seen that in two rows given below the value of HelpfulnessNumerator is greater than HelpfulnessDenominator which is not practically possible hence these two rows too are removed from calcualtions

```
In [22]: display= pd.read_sql_query("""
SELECT *
FROM Reviews
WHERE Score != 3 AND Id=44737 OR Id=64422
ORDER BY ProductID
""", con)

display.head()
```

	Id	ProductId	UserId	ProfileName	HelpfulnessNumerator	HelpfulnessDenomina
0	64422	B000MIDROQ	A161DK06JJMCYF	J. E. Stephens "Jeanne"	3	
1	44737	B001EQ55RW	A2V0I904FH7ABY	Ram	3	

```
In [5]: final=final[final.HelpfulnessNumerator<=final.HelpfulnessDenominator]
```

```
In [6]: #Before starting the next phase of preprocessing lets see the number of entries left
print(final.shape)

#How many positive and negative reviews are present in our dataset?
final['Score'].value_counts()
```

(46071, 10)

```
Out[6]: 1    38479
0    7592
Name: Score, dtype: int64
```

Text Preprocessing.

Now that we have finished deduplication our data requires some preprocessing before we go on further with analysis and making the prediction model.

Hence in the Preprocessing phase we do the following in the order below:-

1. Begin by removing the html tags
2. Remove any punctuations or limited set of special characters like , or . or # etc.
3. Check if the word is made up of english letters and is not alpha-numeric

4. Check to see if the length of the word is greater than 2 (as it was researched that there is no adjective in 2-letters)
5. Convert the word to lowercase
6. Remove Stopwords
7. Finally Snowball Stemming the word (it was observed to be better than Porter Stemming)

After which we collect the words used to describe positive and negative reviews

In [7]:

```
# printing some random reviews
sent_0 = final['Text'].values[0]
print(sent_0)
print("=*50)

sent_1000 = final['Text'].values[1000]
print(sent_1000)
print("=*50)

sent_1500 = final['Text'].values[1500]
print(sent_1500)
print("=*50)

sent_4900 = final['Text'].values[4900]
print(sent_4900)
print("=*50)
```

My dogs loves this chicken but its a product from China, so we wont be buying it any more. Its very hard to find any chicken products made in the USA but they are out there, but this one isn't. Its too bad too because its a good product but I wont take any chances till they know what is going on with the china imports.

=====

this is yummy, easy and unusual. it makes a quick, delicious pie, crisp or cobbler. home made is better, but a heck of a lot more work. this is great to have on hand for last minute dessert needs where you really want to impress with your creativity in cooking! recommended.

=====

Great flavor, low in calories, high in nutrients, high in protein! Usually protein powders are high priced and high in calories, this one is a great bargain and tastes great, I highly recommend for the lady gym rats, probably not "macho" enough for guys since it is soy based...

=====

For those of you wanting a high-quality, yet affordable green tea, you should definitely give this one a try. Let me first start by saying that everyone is looking for something different for their ideal tea, and I will attempt to briefly highlight what makes this tea attractive to a wide range of tea drinkers (whether you are a beginner or long-time tea enthusiast). I have gone through over 12 boxes of this tea myself, and highly recommend it for the following reasons:

-Quality: First, this tea offers a smooth quality without any harsh or bitter after tones, which often turns people off from many green teas. I've found my ideal brewing time to be between 3-5 minutes, giving you a light but flavorful cup of tea. However, if you get distracted or forget about your tea and leave it brewing for 20+ minutes like I sometimes do, the quality of this tea is such that you still get a smooth but deeper flavor without the bad after taste. The leaves themselves are whole leaves (not powdered stems, branches, etc commonly found in other brands), and the high-quality nylon bags also include chunks of tropical fruit and other discernible ingredients. This isn't your standard cheap paper bag with a mix of unknown ingredients that have been ground down to a fine powder, leaving you to wonder what it is you are actually drinking.

-Taste: This tea offers notes of real pineapple and other hints of tropical fruits, yet isn't sweet or artificially flavored. You have the foundation of a high-quality young hyson green tea for those true "tea flavor" lovers, yet the subtle hints of fruit make this a truly unique tea that I believe most will enjoy. If you want it sweet, you can add sugar, splenda, etc but this really is not necessary as this tea offers an inherent warmth of flavor through its ingredients.

-Price: This tea offers an excellent product at an exceptional price (especially when purchased at the prices Amazon offers). Compared to other brands which I bel

ieve to be of similar quality (Mighty Leaf, Rishi, Two Leaves, etc.), Revolution offers a superior product at an outstanding price. I have been purchasing this through Amazon for less per box than I would be paying at my local grocery store for Lipton, etc.

Overall, this is a wonderful tea that is comparable, and even better than, other teas that are priced much higher. It offers a well-balanced cup of green tea that I believe many will enjoy. In terms of taste, quality, and price, I would argue you won't find a better combination than that offered by Revolution's Tropical Green Tea.

Compared to other brands which I believe to be of similar quality (Mighty Leaf, Rishi, Two Leaves, etc.), Revolution offers a superior product at an outstanding price. I have been purchasing this through Amazon for less per box than I would be paying at my local grocery store for Lipton, etc. Overall, this is a wonderful tea that is comparable, and even better than, other teas that are priced much higher. It offers a well-balanced cup of green tea that I believe many will enjoy. In terms of taste, quality, and price, I would argue you won't find a better combination than that offered by Revolution's Tropical Green Tea.

Great flavor, low in calories, high in nutrients, high in protein! Usually protein powders are high priced and high in calories, this one is a great bargain and tastes great, I highly recommend for the lady gym rats, probably not "macho" enough for guys since it is soy based...

My dogs loves this chicken but its a product from China, so we wont be buying it any more. Its very hard to find any chicken products made in the USA but they are out there, but this one isnt. Its too bad too because its a good product but I wont take any chances till they know what is going on with the china imports.
